EDUCATION

University of Michigan

B.S.E in Computer Science

Ann Arbor, MI

Expected Grad: May. 2029

- GPA: 3.9/4.0
- Relevant Coursework: Programming and Introductory Data Structures, Discrete Mathematics, Computational Linear Algebra, Introduction to Data Science

TECHNICAL SKILLS

Languages: JavaScript, Python, C++, Dart, HTML/CSS

Frameworks & Libraries: React, Flutter, Tailwind

Tools & Platforms: Firebase, Oracle Cloud, Chrome MV3, Mapbox, Mux, Git, Figma

EXPERIENCE

Stealth Startup

Jan. 2026 – Apr. 2026

Senior Tech Analyst | Ross Tech+ Consulting

Detroit, MI

- Designed and implemented a multi-page React/TypeScript website prototype for a stealth maritime startup
- Engineered custom Three.js vessel viewers with GLTF model loading, ACESFilmic tone mapping, bounding-box-fit orbit controls, and lazy IntersectionObserver mounting to optimize 3D render performance
- Implemented a Lenis smooth-scroll engine synced to a Framer Motion RAF loop, driving per-word color-fill reveals, multi-phase scroll-pinned sections, and sticky crossfading imagery across multiple website pages

Boone Productions

Sep. 2025 – Dec. 2025

Junior Tech Analyst | Ross Tech+ Consulting

Detroit, MI

- Shipped a JavaScript video pipeline using the Mux API to fetch, manage, and display 50+ videos on the platform
- Built a video tagging and filtering system to categorize content and enable a new discovery experience for end users
- Developed a React-based video streaming interface with reliable cross-platform playback
- Refactored the frontend with Tailwind CSS, resolving 20+ UI bugs and reducing UI code by 30%

PROJECTS

ScopePlus | JavaScript, React, Chrome MV3, Firebase, Claude, Groq

Mar. 2026

- Built a Chrome extension and web app that scrapes graded Gradescope submissions to generate per-question AI feedback, concept tags, practice problems, and a tutor chat for targeted review
- Designed a multi-model service worker pipeline leveraging Claude to extract student work from submission PDFs, Groq for rubric-aligned feedback injected into the Gradescope UI, and Grok for concept tutoring
- Engineered multi-strategy DOM parsing to reliably extract questions, scores, and PDFs from Gradescope's inconsistently structured and lazy-loaded pages, using direct Firestore REST calls over the Firebase SDK
- Unified the extension and web app on a shared Firebase Auth and Firestore schema, syncing reports in real time

StepAi | JavaScript, React, Oracle Cloud, Cohere, Llama 3.3, SSE

Feb. 2026

- Built an agentic job search tool where users input their resume and career goals to receive mutually-informed job and contact rankings, track applications, and draft AI-generated outreach emails
- Designed a multi-phase agent pipeline embedding resumes, jobs, and contacts via Cohere, computing cosine similarity and weighted composite scores across semantic fit, network leverage, and posting recency
- Generated prioritized action queues via rule-based gap analysis detecting pacing gaps, urgent deadlines, and high-score untouched opportunities, with Llama 3.3 producing narrative insight cards in JSON mode
- Leveraged Oracle Cloud as the full backend stack, storing embeddings, scores, and user data in Oracle DB and running managed AI inference endpoints within the same cloud environment
